

IMPORTANT NEWSFLASH!

Channel 9 is televising a Medivet Stem Cell story to be aired on the 6pm News Program tonight (Wednesday)

While it is emanating from Sydney I have been assured it is national. The story is about a Stem Cell Procedure using Medivet's Adipose Stem Cell Procedure Kit by Dr Sam Haynes, from Sydney Animal Hospital.

Channel 9 are also doing promos throughout the day

This is Fantastic Coverage for Medivet and the Medivet team, as well as our hard working distributors.

Congratulations to all the vets who are already using this procedure

Garry Andrews is back from a long business building campaign in the USA and Hong Kong where he has been establishing more Medivet "kingdoms." You can contact him at the office for all the latest info or email him at gmandrews@medivet.net.au. For media coverage contact Jill at our Media Office, email jill@jillstewartmedia.com.au.

Dr Haynes uses a Stem Cell Procedure Kit provided by leading Animal Health company, Medivet. Medivet recently launched an In-house Adipose Stem Cell Procedure Kit (ADSP Kit), to Australian and international veterinarians for the treatment of aging and degenerative diseases in large and small animals.

For the very first time in history, veterinary professionals are now able to perform regenerative stem cell procedures entirely within their own clinic using the animal's own fat-stored adult stem cells, in real time and at a fraction of the cost of previous technologies. Stem cells harvested from the animal's own fatty tissue are filtered and activated using a patented LED Technology. These activated cells are then administered into the patient to accelerate the healing of damaged ligaments, joints and cartilage arising from an injury, disease or degeneration.

"I've done stem cell therapy using Medivet's Adipose Stem Cell Procedure Kit on a number of dogs for a number of different conditions." Said Dr Haynes "I can do the entire procedure in my clinic, in a number of hours and it is far less painful and effective than invasive surgery. In most cases the dogs were up and about almost immediately, with a great long term prognosis!"

"This is the future of animal medicine and I am so excited to be able to offer this groundbreaking treatment to my clients and their beautiful animals."

As these exciting stories of successful treatments reach us we will send them on to you.

From Leslie Sprankling, Company Secretary. Medivet Pty Ltd
